

Artwork preflight

Keep this with your original artwork and the exact configuration you intend to order.

Source file

- ☐ Use the strongest original source, not a screenshot or repeated compressed download.
- ☐ Keep the existing embedded color profile. RGB originals are accepted; do not assign a generic CMYK profile just to upload.
- ☐ Check actual contents: a PDF or .ai container can still contain a raster image.

Finished result

- ☐ Record finished width and height; preserve proportions unless distortion is intentional.
- ☐ Check effective resolution at print size. Original pixels divided by finished inches gives effective PPI.
- ☐ Check spelling, small details, transparency, edge treatment and the intended cut shape.
- ☐ Choose a compatible base and finish. We do not print white ink; white and unprinted areas on clear film remain transparent.

Remember: Numeric setup values come from the actual product template. This checklist does not certify print readiness.
