

Measure the real placement

Print on US Letter paper at 100% / Actual Size. Turn OFF Fit to Page. Check the calibration before using the ruler.

Calibration: The square below must measure exactly 1 inch on each side. The separate metric line must measure exactly 50 mm. If either differs, fix print scaling and reprint.

1 inch square

50 mm calibration line

Six-inch ruler / quarter-inch divisions

Usable placement width: _____ height: _____

Artwork width: _____ height: _____

Surface / coating / obstacles: _____

Material and finish: _____

Keep proportions: A 3 x 2-inch design enlarged evenly becomes 6 x 4 inches. Add space, crop deliberately or redesign to fit a different proportion. Do not stretch it accidentally.

A paper placement check does not establish material suitability, included piece count or exact-fit cut-outs. Confirm the purchased boundary and current product instructions.
