

# Apply a printed sticker

For an ordinary peel-and-stick printed sticker. Use the specific material and surface instructions.

## Prepare

- ☐ Confirm surface compatibility, coating condition and the product-specific application conditions.
- ☐ Clean with a method suitable for both the object and material; remove residue and allow the surface to dry.
- ☐ Check alignment while the release liner still protects the adhesive.

## Apply and check

- ☐ Remove the release liner without separating the printed face or its laminate.
- ☐ Keep fingers away from exposed adhesive as much as possible; support larger stickers.
- ☐ Apply progressively using the product method so a large pocket is not trapped in the center.
- ☐ Inspect edges and follow the exact initial-care guidance before demanding use.

**Remember:** Do not substitute a wet method, aggressive heat, puncturing or solvents from another product guide.
