

Apply a transfer decal

For separate cut-vinyl elements held by temporary transfer tape. Confirm the product-specific dry method.

Identify and position

- ☐ Identify the removable release liner and the temporary carrier holding the lettering.
- ☐ Check surface compatibility, clean and dry using the appropriate guidance, then plan alignment.
- ☐ Use the supported placement/hinge method for that actual product.

Transfer and finish

- ☐ Remove the liner while all intended letters and shapes stay supported by the carrier.
- ☐ Apply progressively and press through the carrier using the recommended tool.
- ☐ Remove the carrier slowly at the recommended low angle after the vinyl adheres.
- ☐ If a small element lifts, stop and follow pressing/removal guidance instead of pulling harder.

Remember: The carrier is removed; laminate on a laminated sticker stays. Large or delicate designs may need a different plan.
